

Control and Optimization for Modern Energy Systems

A battery plant tour and an afternoon of technical talks at the University of Hawai'i at Mānoa

DATE	TIME	VENUE	REGISTRATION
Monday, December 14, 2026 Adjacent to IEEE CDC 2026, Dec. 15–18	8:00 am – 6:00 pm Tour, then talks	UH Mānoa campus Honolulu, O'ahu	No fee Separate event from CDC

About the workshop

The IEEE CSS Technical Committee on Energy Systems (TC-ES) is organizing, with support from the IEEE PES Hawai'i Section Chapter, a full-day technical workshop that brings together researchers and industry practitioners who work on control and optimization for modern energy systems.

A university campus in Hawai'i is a fitting setting for this workshop, because the islands operate some of the most renewable-rich, inverter-dominated grids in the world. Many of the problems that engineers in Hawai'i are solving today inform global solutions for grid-forming control, distributed flexibility, large new loads, and reliability under deep uncertainty.

Program

- Grid-forming and inverter-based resource control
- Next-generation grid codes and ancillary services
- Grid-aware demand response and DER coordination
- Congestion and voltage management
- Virtual power plants and market participation
- Data centers and AI compute as flexible grid assets
- Operational perspectives from Hawaiian Electric

Confirmed speakers

Ken Aramaki
Director, Integrated
Grid Planning,
Hawaiian Electric, USA

Mark Glick
Chief Energy Officer,
State of Hawai'i, USA

Daisy Green
University of Hawai'i
at Mānoa, USA

Bai Cui
Iowa State University, USA

Sairaj Dhople
University of Minnesota,
USA

Vladimir Dvorkin
University of Michigan,
Ann Arbor, USA

Verena Häberle
ETH Zürich, Switzerland

**Patricia
Hidalgo-Gonzalez**
UC San Diego, USA

Sorin Olaru
CentraleSupélec, France

Siva Seetharaman
Purdue University, USA

Johanna Vorwerk
Technical University of
Denmark (DTU), Denmark

Schedule

8:00 AM – 1:00 PM

Kapolei Energy Storage tour and networking

Group buses take participants from the CDC hotel to this 185 MW / 565 MWh grid-forming battery plant on western O'ahu.

1:00 PM – 6:00 PM

Technical talks at UH Mānoa

Buses continue from Kapolei to UH Mānoa for invited talks from universities, Hawaiian Electric, and the State of Hawai'i.

Logistics

- UH Mānoa is a 15-minute drive or a 50-minute walk from the CDC hotel, the Hilton Hawaiian Village in Honolulu.
- The workshop is separate from CDC and has no registration fee.

WORKSHOP ORGANIZERS

Daisy Green, Johanna Mathieu, Mads R. Almassalkhi, and Patrick Panciatici

Questions: dgreen2@hawaii.edu and jlmath@umich.edu
